

CLOUD HOSTING GUIDE

Are you looking to move your Sage 200 into the Cloud?

Move your Sage 200 confidently and with minimal disruption.

Cloud hosting refers to storing and accessing your data and business applications, like Sage 200, via the internet instead of the same materials stored on your company's local hard drive or network servers that only you can access when at your desk.

Benefit from cloud computing, reduce IT expenditure and lose the administrative burden of server maintenance with our dedicated Microsoft Azure hosting service.

Why choose Onesys to host your Sage 200 system?

Well, we already know you as our customer and support your software. Onesys hosting your Sage 200 system will keep everything Sage 200 related in one place with one team.

Using our hosting service, you can be sure that your systems and data are secure, backed up and accessible from multiple devices with the confidence of our Support and SLA's.

Why choose Cloud hosting for your Sage 200?

Fast & Reliable

Automated deployment allows for fast provisioning in Azure from 1.5 days to 60 minutes, minimising the risk of interruptions in running your business due to downtime from unexpected outages.

Flexible & Scalable

Quickly add new capabilities and users as your business needs require.

Azure Backed Cloud Security

Depend on Microsoft Azure-backed security to help protect your data and the experience of 8k global customers who already successfully use their Sage solution in the cloud leveraging Microsoft Azure.

Cost Effective

Minimise the hassle and unexpected expenses associated with maintaining your own IT infrastructure – plus avoid the expense of retraining, or rebuilding your financial and commercial business solution.
